Calving (June 1–June 15)

Areas of Concentrated Use by Caribou

- **High Density**
- **Medium Density**
- **Low Density**

Data source: Utilization distribution contours from fixed-kernel analysis of locations of radio-collared female caribou (telemetry database from ADF&G, North Slope Borough, US BLM, and ConocoPhillips Alaska). Contours enclose stated percentages of all collar locations. High-, medium-, and low-density areas are the 50%, 75%, and 95% utilization distribution contours, respectively. Bandwidth calculated with LSCV.
