

Public Health Advisory

DO NOT CONSUME TAP WATER – ETHYLENE GLYCOL WATER CONTAMINATION

Residents are advised NOT to drink or consume water suspected of ethylene glycol (antifreeze) contamination until further notice. Do not use affected water for drinking, cooking, making ice, preparing infant formula, or brushing teeth. Boiling the water does NOT make it safe. Use bottled or another confirmed safe water source.

SEEK IMMEDIATE MEDICAL ATTENTION

If you have consumed the affected water and experience any of the following, seek emergency medical care immediately:

- Nausea or repeated vomiting
- Headache, dizziness, weakness, or unusual drowsiness
- Confusion, slurred speech, difficulty walking, or appearing intoxicated
- Rapid/deep breathing, shortness of breath, or difficulty breathing
- Chest pain, rapid/irregular heartbeat, or fainting
- Severe abdominal, back, or flank pain
- Decreased urination or inability to urinate
- Swelling of the legs, ankles, or feet
- Muscle twitching, cramps, or spasms
- Seizures
- Extreme sleepiness, loss of consciousness, or inability to wake

DELAYED SYMPTOMS

A person may initially feel well after exposure, with serious effects developing over the following hours or days, including kidney injury.

DO NOT WAIT

If you believe you or a family member consumed a potentially significant amount of contaminated water, do not wait for symptoms to develop.

ALTERNATIVE SAFE DRINKING WATER

Residents should continue using an alternate safe drinking-water source until officials confirm the water is safe for consumption.

CALL 911 IMMEDIATELY

For difficulty breathing, seizures, severe confusion, loss of consciousness, or if someone cannot be awakened.

For any questions, please reach out to:

☎ KAK CLINIC : 907-640-6413

☎ SSMH ER: 907-852-9229

☎ POISON CONTROL: 1-800-222-1222

Additional information and updates will be provided as they become available.
